

watermark^{medical}™

Better sleep testing.

A more effective dental practice.

1. IN-OFFICE SCREENING

Our clinically validated screening system helps dentists identify OSA in their patients so they can take the next steps towards testing, obtaining a proper diagnosis, and necessary treatment.

2. TEST PATIENTS FROM HOME

Patients are more receptive to the trend of “at-home diagnostics” and it provides a more cost-effective solution to patients with high insurance deductibles. Our tests have been used to help over 1.35 million patients, averaging more than 180,000 tests every year.

3. REAL-TIME INTERPRETATION

We bridge the gap between dentists and sleep physicians through introductions to our vast network of state-licensed, board-certified Sleep Physicians. Our network of health professionals ensure better treatment for patients and better support of their dental providers.

4. TREATMENT OPTIONS

If an oral appliance is recommended, our network of Board-Certified Sleep Physicians can provide you with the necessary documentation to begin the oral appliance case. Our ARES™ platform offers the unique option to streamline obtaining the Letter of Medical Necessity should treatment be recommended.

5. BETTER COMPLIANCE

Many of your patients suffering from sleep apnea are searching for an alternative to a cPAP. With the compliance rates of cPAP estimated to be as **low as 17%**, OAT is an alternative treatment option for these patients. By diagnosing OSA in your dental office, you have the ability to offer OAT treatment options to your patient.

The ARES™ Home Sleep Test

- Pulse oximeter built in to head piece.
- Up to 3 nights of sleep data provides more information for the physician to make an accurate diagnosis.
- Audible system alerts the patient should any of the sensors on the ARES™ become disconnected during the test.

THE BEST HOME SLEEP TEST FOR DIAGNOSING SLEEP APNEA

With the innovation of our ARES™ Home Sleep Test system, Watermark Medical is an industry leader in sleep diagnostics. We have the lowest failure rate in the market and 96% concordance with simultaneous lab PSG.

The ARES™ device features an accessible cloud portal, voice prompted instructions, and multiple recorded channels, including:

AIRFLOW

**SPO2, EEG,
EOG, EMG**

HEART RATE

**HEAD POSITION &
MOVEMENT**

SNORING

Better Sleep Testing. A More Effective Diagnosis.
