■ Bel-Nova

Dental Light

See your practice in a new light.

The Belmont Standard

Belmont's Bel-Nova is bringing you the best dental lighting technology available. This world class LED light offers better illumination in a high performance oval lighting pattern while letting off less heat and sound than traditional halogen bulbs.

Out of the Shadows

This cutting edge, six bulb pattern focuses more light into the patient's oral cavity, giving doctors a better vision of their patient's mouth by producing a oval pattern. It also keeps light from reflecting painfully into the patient's eyes during procedures.

■ Proof In Pictures

The lighting disbursement pictured below creates less shadows, allowing doctors to see further back into their patients' mouths, leading to enhanced performance and more accurate diagnoses.

Less is More

- **Touchless**
Keep your operatory sanitary and easy to maintain with the Bel-Nova's touchless, soft on/off sensors. Avoid germs, residue, and fatigue by simply waving your hand over the sensors to adjust the lighting, and even to switch to composite mode.
- **Stepless**
The days of catering to predetermined lighting settings are over. Adjust luminosity to your exact preference with the Bel-Nova's stepless technology.
- **Seamless**
The Bel-Nova is made to seamlessly integrate into your existing operatory and daily procedures. With multiple set-up options featuring wider angles, longer arm reach, and 3-axis rotation the Bel-Nova and Belmont have you covered - from every position.
