Veraview IC5 HD

High Definition Panoramic Imaging

Industry Leading Exposure Time

Extremely fast 5.5 second panoramic with significantly lower dose

High Definition

Improved definition of 96 μm (10 second scan) for the ultimate high definition image

Class-Leading Clarity

DDAE (Digital Direct Auto Exposure) and AIE (Auto Image Enhancement) functions provide sharp and clear images

Quick and Easy Patient Positioning

With integrated triple laser beam alignment

Fully Automatic Simplified Operation

Simply select the desired program: Panoramic, TMJ or PEDO. In addition, no parameter setting is required

Digital Technology

No film or film development are required

Low Power Consumption

Lightweight and Compact Design

Select from two levels of speed and resolution

Depending on the diagnostic need, you can take a quick, 5.5 second panoramic for the lowest dose, or a 10 second scan for the ultimate, high resolution image.

High Speed

With an industry leading exposure time of 5.5 seconds, the Veraview IC5 is not only significantly faster than conventional film-based panoramic systems, but also requires much less radiation.

High Speed: only 5.5 seconds, 192 μm , 1/6** X-Ray exposure

High Definition

Pixel size is reduced 25% compared with the former model, so it produces superior images of a higher resolution.

High Definition: 10 second exposure, 96 μm

High Speed: 5.5 seconds (192 μm)
High Definition: 10 seconds (96 μm)

*as of January 2010
**Compared to a standard panorama image using film
and made by Morita's Veraviewepocs (16 seconds,
75kV, & 9mA)

The combination of DDAE (Digital Direct Auto Exposure) and AIE (auto image enhancement) produces high quality images with optimum contrast and uniform density.

Digital Direct Automatic Exposure (DDAE)

DDAE controls the X-ray tube current (mA) simultaneously by detecting X-rays passing through the patient. This improves the dynamic range, and, along with Automatic Exposure (AE), results in exceptionally clear images with the best possible contrast and even density. The automatic exposure level can be adjusted to meet your individual requirements.

Automatic Image Enhancer comparison

Automatic Image Enhancer (AIE)

AIE is a special software function that optimizes density throughout an entire image, and highlights the brightness level of detailed areas, to create images with an extremely high degree of clarity. DDAE and AIE perform a logarithmic conversion to produce the highest quality image possible.

Panoramic

Standard Panoramic

Clear, sharp images with a wide image layer. The thick, specifically designed image layer accommodates all possible variations of dental arch shapes and sizes to produce extremely clear and sharp images.

Pedodontic Panoramic at Reduced Radiation

For examinations of children or people with small jaws, the rotation range of the arm is diminished, thereby further reducing radiation exposure.

TMJ Quadruple Exposures: for Open and Closed Condyle Views

Four separate shots of condyle fit onto one image. In each case, two sets of rotation for left and right condyle head for open and closed condition.

Clinical images provided by: Bruno Azevedo, DDS, MS, Oral Maxillofacial Radiologist; and Kitasenju Radist Dental Clinic, i-View Imaging Center, Japan.

Specifications

Trade name:	Veraview IC5 HD
Model:	XDP1
Input voltage:	EX-1: AC 100V/115V/120V 50/60 Hz EX-2: AC 220/230/240V 50/60 Hz
Power consumption:	0.85 kVA
Dimensions	
Main unit:	W 880 x D 970 x H 2350 mm (2180 mm option) (W 35" x D 38-1/4" x H 92-1/2" (85-3/4" option))
Weight:	Approx. 110 kg (242.50 lbs)
X-ray generator	
Tube voltage:	60-70 kV (depending on exposure mode)
Tube current:	1-7.5 mA (depending on exposure mode)
Effective focal spot:	0.5 mm
Panoramic image	
Exposure time:	High speed mode: Approx. 5.5 sec. High definition mode: Approx. 10 sec.
Imaging programs:	Standard Panoramic Pedodontic Panoramic TMJ Quadruple Image

- Always have patients wear X-ray protective gear.
