Dear Distributor Partner,

Kulzer is pleased to announce the introduction of our Venus® Diamond ONE and Venus® Pearl ONE, single-shaded direct restorative composites. The materials feature impressive shade matching capabilities and therefore, may be used for most of today's composite demands. The Venus ONE composites are manufactured with the same scientifically documented TCD resin matrix that allow Venus® Diamond and Venus® Pearl direct restorative composites to remain highly regarded among clinicians to date.

Features and Benefits:

- Unique Adaptive Light Matching Technology-allows restorations to reflect and absorb light within the natural tooth resulting in a restoration that blends beautifully with the surrounding tooth structure.
- Proven TCD resin is free of BPA and BisGMA related monomers, while further rendering a material that resists fractures and chipping.
- The material boasts a low shrinkage stress-providing a good marginal seal.
- High flexural strength allows the material to expand and contract with the tooth as intraoral temperatures and conditions change.
- Choice of handling viscosities: Venus ONE Diamond-which features a firmer, non-stick handling-ideal for high-impact regions of the oral cavity, and Venus ONE Pearl-which features a creamy, non-stick handling for more conventional regions within the oral cavity.

The materials are available as follows:
