| | | The glove material has to be impermeable and resistant to the product/ the substance/ the preparation. |
| | | Due to missing tests no recommendation to the glove material can be given |
| | | for the product/ the preparation/the chemical mixture. |
| | | Selection of the glove material on consideration of the penetration times, |

| | | · Material of gloves |
| | | The selection of the suitable gloves does not only depend on |
| | | the material, but also on further marks of quality and varies from |
| | | manufacturer to manufacturer. As the product is a preparation |
| | | of several substances, the resistance of the glove material can |
| | | not be calculated in advance and has therefore to be checked |
| | | prior to the application. |
| | | Penetration time of glove material |
| | | The exact break through time has to be found out by the |
| | | manufacturer of the protective gloves and has to be observed. |
